Subject: Wolves

It was with dismay and disdain that I read of the decision to cull wolves in the territory using radio collaring and aerial hunting.

This decision is not based in scientifically based research results. It is a decision based purely on political posturing and an inability to see the true nature of the problem affecting the caribou: loss of habitat due to the greed of humans. Clear cut logging and development of the area is the true cause leading to the decline of caribou herds.

As usual, wolves are maligned and seen as the problem when in reality they play a very important role in the ecosystem balance. I implore you on behalf of the wolves who have no voice of their own, to stop this inhumane and uneducated decision.

Sincerely,

Kristen Rekker
